1] Instruction for Powershell

To customize your greeting message in Windows Terminal, you can follow these steps.
since there are no source of videos are made for windows terminal about the banner.

1. Open the PowerShell Profile:

- Launch Windows Terminal.
- Type the following command and press Enter to open the profile script in your default editor:

```
notepad $PROFILE
```

- If the file doesn't exist, PowerShell will prompt you to create it.

2. Add Your Greeting Message:

- In the profile script file, add a command to display a custom greeting. For example:

```
Write-Host "Welcome to your customized Windows Terminal!" -ForegroundColor Cyan
```

- You can also include ASCII art or dynamic content like the date and time (choose anyone or create your own through [fidget fonts generator](#)):

```
$asciiArt = @"
      _      _      _      _      _
     \| \|      \| \| \| \| \| \| \|
      \| \| ^ \| \| \| \| \| \| \|
       \| \| \| \| \| \| \| . ` \| \|
        \| ^ \| \| \| \| \| \| \|
         \| \| \| \| \| \| \| \| \|
          \| \| \| \| \| \| \| \|
"@

Write-Host $asciiArt -ForegroundColor Yellow
Write-Host "Today's Date: $(Get-Date -Format "dddd, MMMM dd, yyyy")" -Foreground
Color Green
```

```
$asciiArt = @"
      _      _      _      _
    | |      ( _ )  | |      ( _ )
    | |      _ _  | |      _ _ _ _ _
    | |      | / _ \ | |      | / _ \ | ' _ \ / _ \
    | | _ _  | | ( _ | | _ _  | | ( _ ) | | | \ _ \
    | _ _  | | | \ _ / ( ) | | | \ _ / | | | _ _ /
              | /
"@

Write-Host $asciiArt -ForegroundColor Cyan
Write-Host "Welcome, JoshTheBoss! Have an epic terminal session!" -ForegroundColor
```

3. Save and Close the File:

- Save your changes and close the editor.

4. Reload the Profile:

- To see the changes immediately, reload the profile by running:

```
. $PROFILE
```

5. Customize Further (Optional):

- You can add environment variables, aliases, or scripts to run whenever you open the terminal.

2] Introduction for Windows Command Prompt

For **Command Prompt (CMD)**, there is no direct profile file like PowerShell, but you can achieve a similar setup using a batch file (`.bat`) and registry configuration. Follow these steps:

1. Create a Batch File

1. Open **Notepad**.
2. Add the following code to display your ASCII art and greeting message if you are facing error on the figlet font then use apostrophe at the beginning and the end:

```
@echo off
cls
echo.
echo Welcome to your customized Command Prompt!
echo.
echo "  _ _ _ _ _ _ _ _ _ _ "
echo " \ \      / / _ \ \ | | | | "
echo "  \ \  / \ / / | | | \ | | | "
echo "   \ \  \ / / | | |  . ` | | | "
echo "    \ \  / | | | _ | | \ | | | "
echo "     \ \  \ / \___/ | | \_ | | | "
echo.
echo Today's Date: %date%
echo. Save the file as custom_startup.bat (e.g., C:\custom_startup.bat).
```

2. Configure CMD to Run the Batch File at Startup

1. Open **Registry Editor**:
 - Press `Win + R`, type `regedit`, and hit Enter.
2. Navigate to:

```
plaintext
CopyEdit
HKEY_CURRENT_USER\Software\Microsoft\Command Processor
```

If you don't see the **Command Processor** key in the `HKEY_CURRENT_USER\Software\Microsoft` path, you can manually create it. Here's how:

Steps to Create the Command Processor Key and Configure AutoRun

1. Open Registry Editor:

- Press `Win + R`, type `regedit`, and press Enter.

2. Navigate to the Path:

- Go to:

```
HKEY_CURRENT_USER\Software\Microsoft
```

3. Create the Command Processor Key:

- Right-click on the **Microsoft** folder.
- Select **New > Key**.
- Name it:

```
Command Processor
```

4. Add the AutoRun Value:

- Select the newly created `Command Processor` key.
- In the right pane, right-click and choose **New > String Value**.
- Name it:

```
AutoRun
```

- Double-click the `AutoRun` value and set it to the path of your batch file:

```
C:\custom_startup.bat
```

Verify the Setup

1. Close and reopen **Command Prompt**.
2. The batch file should now run automatically and display your custom greeting.
3. Add or modify the `AutoRun` value:
 - Right-click in the right pane and choose **New > String Value**.
 - Name it `AutoRun`.
 - Double-click the `AutoRun` key and set its value to the path of your batch file:

```
C:\custom_startup.bat
```

3. Test the Configuration

1. Close and reopen Command Prompt.
2. The custom ASCII art and greeting message should now display automatically.

4. Remove or Edit the Setup (Optional)

- To stop showing the message:
 - Open **Registry Editor** and delete the `AutoRun` entry.
- To edit the greeting:
 - Modify the `custom_startup.bat` file.

3] Customize your prompt shell
